Daiichi Jitsugyo Starts to Provide Solutions for Logistics Automation of Factories and Warehouses

- LOGITO Applies Free Design to Smart Logistics -

DAIICHI JITSUGYO CO., LTD., a trading company handling industrial machinery (“DJK”, Head Office: Chiyoda-ku, Tokyo, Japan, President & CEO: Ichiro Uno) has started the provision of LOGITO, a solutions service for automating logistics utilizing automated warehouses, autonomous mobile robots (AMR) and robot arms, to companies in the manufacturing and warehouse industries.

Moves toward automation and labor saving using robotics and digital technologies are picking up speed, to counter the problem of labor shortages due to a reduced manufacturing workforce and a super-aging society in Japan. In line with this trend, DJK has established a solutions service to provide support from analysis of frontline operations in factories and warehouses, to realize the automation of onsite logistics.

The key advantage of LOGITO is its superlative cost performance, grounded on free design. It also utilizes our global network to procure equipment and machinery matching customer needs from Japan or around the world.

Our vast array of ideas will optimize onsite logistics, contributing to better productivity in factories and warehouses.

Service brand logo

Note: The name “LOGITO” derives from the meaning of “To apply Logistics,” which means establishing logistics.
