Daiichi Jitsugyo Signs Exclusive Distributorship Agreement with Flisom for Thin Film Lightweight Flexible Solar Panels in Japan

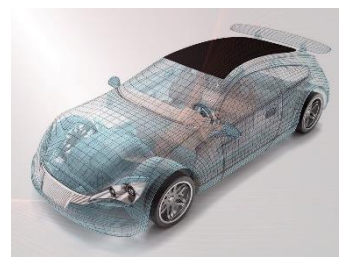

Daiichi Jitsugyo Co., Ltd. (Head Office : Chiyoda-ku, Tokyo, President and CEO : Ichiro Uno) and Flisom AG (Head Office : Zurich, Switzerland, Founder & Chairman : Dr. Ayodhya N. Tiwari) have signed an exclusive agreement to distribute thin film lightweight flexible solar panels in Japan.

Flisom is a manufacturer of photovoltaic panels that develops ultra-thin solar modules based on innovative thin film solar technologies from Switzerland.

Thin film lightweight flexible solar panels can generate energy even in the shade, hold strong against heat, and are a CIGS solar panel* that demonstrates a high level of actual power generation. In addition, by having a very light and thin structure (2.0 kg/m², 2.0 mm thick) compared to conventional silicon-based panels, they are able to be installed in places and curves, which had been considered difficult in the past.

By expanding application areas of this product, we will work to expand renewable energy that effectively utilizes unused space and aim to realize a decarbonizing society.

* Solar cells produced from compound semiconductors combining four elements: copper (Cu), indium (I), gallium (G), and selenium (Se).
